

Key Benefits

Security

- User names and passwords are never stored on a computer's hard drive for hackers to find.
- User names and passwords can be long, complex and random to prevent hackers from easily guessing them.

Convenience

- Never remember or type your passwords again.
- Every website account, document, application and computer can have a different user name and password thereby preventing vulnerability.

Portability

- Use Power LogOn to access your logon information wherever the software is installed.
- The smartcard fits inside your wallet or can be used as an employee badge.

Ease of Use

- Click on the sites you want to access and let Power LogOn do the rest.

Testimonials

“Power LogOn is much more than a tool of convenience. The smartcard technology enables users to create and store unique and complex passwords for every program and online resource they access. This frees users from having to create simplistic passwords they can remember, which is one of the weaker links in most security programs. This is an important layer of security that truly complements antivirus, firewall and spam solutions.”

Jonathan Fernandez, CEH, CHFI, CISSP
Digital Barricade

“This is a simple solution to manage all of your passwords that should have been introduced with the introduction of the internet.” “This is by far the best product to manage all of your passwords.”

Michael Jalaty,
Financial Advisor

Power LogOn™

Protecting your identity from hackers

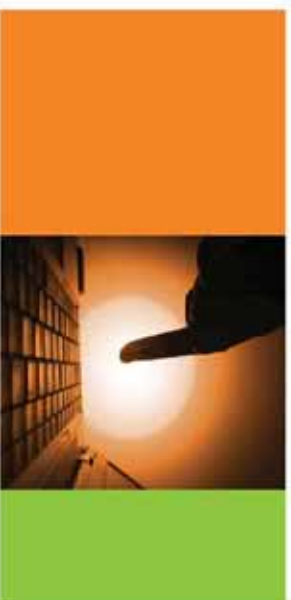

You think your identity is safe from computer hackers using current antivirus and blocker software?

80% of all computer security breaches are caused by bad passwords

Think Again!

Power LogOn™

Protecting your identity from hackers

Features

80% of all network security problems are caused by bad passwords¹.

Power LogOn includes a random Password generator. Because the user never has to remember or type these passwords, **Power LogOn** is both convenient and secure.

9 million Americans were victims of identity theft in 2005, costing them thousands of dollars and lost time to resolve².

With **Power LogOn** every computer, network, data file and web site can have its own complex, long, unique password so if one account is compromised all your other accounts are still safe.

HALF of all identity theft is perpetrated by friends, neighbors, co-workers, family members or relatives³.

Power LogOn uses two-factor authentication: The smartcard and its unique PIN. Once you remove your card from the computer, all your passwords are removed as well.

46% of all identity theft happens by means of Internet accounts⁴.

Power LogOn uses PIN protected smartcard technology to protect your online accounts. The card is automatically locked if the PIN is entered incorrectly 3 times. All cards can be restored by only an authenticated person.

75 million to 150 million phishing emails are sent daily⁴.

Power LogOn protects against phishing attacks by not transmitting any information to a website that it does not know.

“Until now only governments and corporations have used smartcard technology.”
